

Spring Street – Full Stack Internship Assignment

Objective

Build a market insights and portfolio analytics tool that demonstrates your ability to work on frontend, backend, or both, with a strong emphasis on visual creativity, design quality, meaningful animations, and customer-friendly UX.

Problem Statement

Build a Market Insights & Portfolio Analytics Dashboard using real market data. Create an equal-weighted portfolio consisting of 3–5 tickers of your choice, and generate insights based on historical market performance.

Data Source

You may use Yahoo Finance to fetch 5 years of OHLC data for the selected stocks or ETFs.

Frontend Requirements (High Priority)

- Use any Frontend Framework of your choice (Preferred: React.js / Next.js)
- Use any visualization library
- Display 5-year OHLC price insights
- Create portfolio analytics using an equal-weighted portfolio (portfolio value, asset contribution, basic metrics)

Design & UX Expectations

- Strong visual hierarchy and layout
- Meaningful animations and transitions
- Customer-friendly interactions
- Clear loading, empty, and error states

Backend (Optional but Bonus)

- Use Python or Go to fetch and process data
- Expose REST APIs for frontend consumption

Evaluation Criteria

- UI/UX quality and visual creativity
- Data visualization clarity and insight generation
- Frontend fundamentals
- Backend integration (if applicable)
- Code quality and completeness

Submission Instructions

- Push code to a public GitHub repository
- Include README with setup steps, explanation of insights, and screenshots
- Submission link and deadline will be shared separately
